

In conjunction with Nottinghamshire Police

How Datatag Electronic Security Systems work...

Datatag offers a multi-layer approach to identification that makes life difficult for even professional bike thieves!

The kit is simple to fit and includes both visible and hidden identifiers including a *Datatag transponder* that gives your bike a **unique electronic finger print**.

Bike theft is well known to be a problem and many owners think that just by registering them on some database that theft will miraculously stop but the truth is that registration without the right identification system just doesn't work.

The Datatag system offers the premier identifiers

combined with probably the most sophisticated database ever devised.

Equally importantly **Datatag works with the Police to back up the product** and provides free scanning equipment, database access on a 24/7 basis as well as technical training.

Owners of Datatagged cycles also benefit from reduced premiums from the major insurers.

***For cycle security
there is only one choice...***
